

Day 1/14 — HTML Basics: Web Development Ka Pehla Kadam

1. HTML kya hai?

- HTML ka full form hai **HyperText Markup Language**.
- Ye web pages ka structure banata hai, matlab content ko organize karta hai.
- Har website ki shuruaat HTML se hoti hai.

2. Basic HTML Page Structure:

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
  <title>Mera Pehla Page</title>
```

```
</head>
```

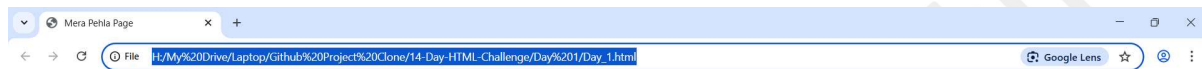

```
<body>
```

```
  <h1>Namaste Friends !</h1>
```

```
  <p>Yeh mera pehla HTML page hai.</p>
```

```
</body>
```

```
</html>
```

Hello Friends! 🖐️

Yeh mera pehla HTML page hai. 🚀

3.Code Breakdown:

- **<!DOCTYPE html>**: Browser ko batata hai ki ye HTML5 document hai.
- **<html>**: Poore page ka root element.
- **<head>**: Page ke meta information ke liye (title, charset, CSS links).
- **<body>**: Jo content user ko dikhana hai, wo yahan likhte hain.
- **<h1>**: Heading tag, sabse bada heading.
- **<p>**: Paragraph tag.

4. Aaj ka task (5 min):

1. Upar diye gaye code ko apne text editor (Notepad/Vs Code) mein type kar ke run karo.
2. File ko day1.html naam se save karo.
3. Browser mein open karo aur apne browser ka screenshot lo.
4. Screenshot ya apne code ka link yahan comment mein share karo!

5. Bonus Tip:

- Har tag ka closing tag hota hai (**</tagname>**), is baat ka dhyan rakho — exception kuch tags jaise ka hota hai self-closing.
