

 Day 2/14 —

HTML Headings & Paragraphs

Aaj hum HTML ke sabse important tags — **Headings** aur **Paragraphs** ke baare me seekhenge, jisse aap apne web page ka content logically aur sundar tarike se present kar sakte hain.

Headings kya hain?

- Headings 6 levels ke hote hain: <h1> se lekar <h6> tak
 - <h1> sabse bada heading hota hai, jo page ka main title dikhata hai
 - sabse chhotा heading hota hai. Iska use tab hota hai jab aap ek badi heading ke niche wali chhoti heading ke bhi niche aur chhoti heading banana chahte ho. HTML me ye <h6> ke barabar hai.
 -
 - Headings SEO (Search Engine Optimization) ke liye bhi bahut important hote hain
-

Paragraphs kya hain?

- Paragraphs ke liye <p> tag use hota hai
- Ye text ko paragraph form me dikhata hai
- Paragraphs se content readable aur organized lagta hai

Example Code:

```
<!DOCTYPE html>
<html>
  <head>
    <title>Headings & Paragraphs Example</title>
  </head>
  <body>
    <h1>Hello Friends! 🙌 </h1>
    <h2>I am Premkumar Patil</h2>
    <h3>Ham 14 days ka challenge lene ja rahe hai 🍪 </h3>
    <h4>Isme HTML ka basic padane wale hain 📚 </h4>
    <h5>Har din ek naya topic sikhenge 🗓 </h5>
    <h6>Step by step aage badhenge ➡ </h6>
    <p>Yeh mera dusra din hai learning challenge ka.</p>
  </body>
</html>
```

Welcome to My Website

About Me

My Skills

Hello! Main Premkumar Patil hoon, aur main HTML seekh raha hoon.

Yeh mera dusra din hai learning challenge ka.

Aaj ka task (5 min):

1. Upar diya gaya code apne editor me likho ya copy-paste karo
 2. File ko day2.html naam se save karo
 3. Browser me open karke heading aur paragraph ka difference observe karo
 4. Screenshot lo aur apne post me share karo, ya CodePen link comment me daalo
-

Bonus Tip:

Headings ka order sahi rakho — pehle <h1>, fir <h2>, uske baad <h3>... aise step-by-step niche jao. Isse Google ko samajhne me aasani hoti hai ki kaunsa part main hai aur kaunsa sub-topic, aur screen readers visually impaired users ke liye sahi order me read karte hain.
