

 Day 8/14 –

## HTML Attributes: Elements Ko Extra Power Dena

Aaj hum seekhenge ki **HTML attributes** kaise kisi tag me extra information add karte hain — jaise **link ka address** , **image ka source**, **placeholder text**, etc.

### HTML Attributes kya hote hain?

- 💡 Attributes HTML tags ke andar likhe jaate hain aur unka behavior ya appearance control karte hain .
- ✓ Ye hamesha name="value" format me hote hain.

### Common Attributes:

- 🔗 href → Link ka URL set karta hai (<a> tag ke liye)
- 🖼️ src → Image ya media ka source (<img>, <video>)
- ♿ alt → Image ka alternative text (SEO + accessibility)
- 💬 title → Tooltip text jab mouse hover kare
- ✍️ placeholder → Input field me hint text
- ID id → Unique element identifier
- 🎨 class → CSS styling ke liye group name

## Example Code:

```
<!DOCTYPE html>

<html>
  <head>
    <title>HTML Attributes Example</title>
  </head>
  <body>
    <h1>HTML Attributes Demo</h1>

    <a href="https://www.example.com" title="Visit Example Website">Click Here</a>
    <br><br>

    
    <br><br>

    <input type="text" placeholder="Enter your name">
  </body>
</html>
```

### Aaj ka task (5 min):

- Upar ka code type karke **day8.html** me save karo
- Apna **image path, link URL** aur **placeholder text** change karo
- Browser me open karke result dekho

### Bonus Tip:

-  Accessibility ke liye images me hamesha **alt attribute** add karo
-  id unique hota hai, jabki  class multiple elements me use ho sakta hai
