 Day 12/14 –

# HTML Comments & Best Practices: Code Ko Samajhne Layak Banayein

 

Aaj hum seekhenge ki HTML me comments kaise likhte hain aur coding ke best practices kya hote hain, taaki hamara code clean, readable aur maintainable rahe.  

### Comment kya hota hai?

 Comment ek aisa note hota hai jo HTML code me likha jaata hai lekin browser me display nahi hota. Ye mainly developer ke liye hota hai.

### Syntax:

<!-- Ye ek HTML comment hai -->

## Example Code:

```
<!DOCTYPE html>

<html>

    <head>
        <title>HTML Comments Example</title>
    </head>

    <body>
        <!-- Page ka heading -->
        <h1>Welcome to My Website</h1>

        <!-- About section -->
        <p>Yeh ek simple webpage hai jisme comments ka use dikhaya
        gaya hai.</p>

        <!-- TODO: Add contact form here -->
    </body>

</html>
```

### Best Practices:

- 1 Comments ka use karo** — Complex code samjhane ke liye 
- 2 Consistent indentation rakho** — 2 ya 4 spaces 
- 3 Meaningful naming** — IDs aur classes clear hone chahiye 
- 4 Extra code remove karo** — Unused HTML delete karo 
- 5 Validate HTML** — W3C Validator use karo 

### Aaj ka task (5 min):

- 👉 Apne HTML project me important sections ke upar comments likho
- 👉 Har section ka short description do

### Bonus Tip:

- 🌟 Comments ka use zyada mat karo — sirf zaruri jagah hi
- 🌟 TODO comments likho taaki baad me changes easily track ho sake
