

 Day 11/14 –

**HTML <div> & <span>:  
Content Ko Organize Karna**

Aaj hum seekhenge ki HTML me `<div>` aur `<span>` ka use karke content ko kaise structure aur style dete hain. Ye dono tags web design me layout banane ka basic foundation hote hain.

### **<div> & <span> kya hote hain?**

- `<div>` → Block-level container jo ek poora section leta hai.
- `<span>` → Inline container jo sirf text ya content ka chhota hissa wrap karta hai.

### **Key Differences:**

- `<div>` block-level hai (new line se start hota hai)
- `<span>` inline hai (same line me rahta hai)

## Example Code:

```
<!DOCTYPE html>

<html>
  <head>
    <title>Div & Span Example</title>
  </head>
  <body>
    <h1>Div & Span Demo</h1>

    <!-- Div Example -->
    <div style="background-color: lightblue; padding: 10px;">
      <h2>This is inside a Div</h2>
      <p>Div ek block-level container hota hai.</p>
    </div>

    <!-- Span Example -->
    <p>HTML me <span style="color: red;">Span</span> inline text ko
    style karne ke liye use hota hai.</p>
  </body>
</html>
```

### Aaj ka task (5 min):

- Upar ka code copy-paste karke **day11.html** me save karo
- Apna ek section <div> ke andar design karo
- Ek paragraph me kuch text ko <span> se highlight karo

### Bonus Tip:

- 💡 <div> ka use layout banane me hota hai, <span> ka use text styling me hota hai
- 🎨 CSS ke saath inka magic dikhta hai — try different colors, borders, margins
